

The IDEA

HELTI - functional elements

SEARCH — we provide an opportunity to search for specialized medical information on the web. For more precise searching, we provide **additional filters** as: the type of web pages (blogs, forums, wiki, e-commerce), the type of information (business, religion, science), gender, health risks (cardiac, respiratory, neurological, etc.), timeliness (published in the last 24 hours, last week or last year) and others...

DASHBOARD — the milestone — a unique functionality enabling users to insert their personal data and information about members of their family (physical data, bad habits, social or ethnic origin, etc.), which are used on the one hand as an additional filters in the search, and on the other hand as a **personal space** where all available information on the web is refracted through personal data and preferences. User-dashboard provides an **exceptional opportunity** to receive personalized information tailored to a variety of external factors - such as meteorological indicators, data on the incidence in some areas (from large cities to small villages), different types of statistics. Here is the algorithm for generating personalized diet-tailored to personal and family preferences of consumers.

MAP — a standard option providing positioning information of objects on a map. The uniqueness of Helti-map is that it **allows filtering of results in medical facilities specific characteristics** such as: displaying only non-stop pharmacies or only those that are currently open or displaying medical facilities providing particular type of medical activity.

Data Processing Solutions

A CLOSER LOOK

WORLD DATA — a unique combination of vast amount of medical information available on the Internet. We've developed specific interfaces for the presentation of different types of data - starting from the information on the individual drugs, diseases and others...

FOR PROFESSIONALS — a specialized element of search engine designed exclusively for medical professionals. Through it

each specialist can be acquainted with the latest scientific studies in the medical field, subscribe to receive specific information or he or she could share their own experience.

SETTINGS — ability to customize separate search functions such as the interface language, integration of respective user profiles in various social networks, adjustment of security and sharing options.

Short end-user guide

easy, fast and secured as never before...

STEP 1 — go to WWW.HELTI.NET

STEP 2 — SIGN UP...

Registration successful

STEP 3 — fill in your DASHBOARD...
